WATER MANAGEMENT AND AIR QUALITY SOLUTIONS

SUREVENT PROVIDES BESPOKE WATER MANAGEMENT, AIR QUALITY AND KITCHEN CLEANING SOLUTIONS.

We are experts in water management covering all associated services for cooling towers, domestic services and cold water storage in accordance with HSC ACoP L8. Our services include legionella risk assessments, legionella monitoring, remedial works, independent consultancy and training.

Our indoor air quality services are undertaken in accordance with HVCA TR19 and CIBSE TM26 and include risk assessments, air quality monitoring and remedial works.

Offering a nationwide service, our professionals will make sure your working environment is a healthy place to work and is compliant with all legislation.

WATER MANAGEMENT

Ensuring health and safety compliance is a headache for many employers. We provide a comprehensive range of services to give you peace of mind that your water management programme is cost effective, efficient, compliant and is optimised for your business.

Legionella Risk Assessment

Surevent is experienced in undertaking and completing legionella risk assessment contracts for customers nationwide. Our risk assessment procedure will ensure compliance with current statutory requirements.

Our comprehensive legionella risk assessment includes:

- ✓ Risk identification
- ✓ Assessment of risk sources
- ✓ A prioritised list of current risk levels
- ✓ Remedial actions suggesting suitable solutions
- ✓ Implementation, management and monitoring procedures
- ✓ Schematic drawings

Legionella Monitoring

Regular monitoring of water systems, carried out as part of a legionella risk management programme, will greatly reduce the risk of legionella. On-going monitoring and management is essential to ensure continued compliance.

We can assist with all of the following:

- ✓ Planned preventative maintenance (PPM)
- ✓ Weekly flushing seldom used outlets
- ✓ Monthly temperature monitoring
- ✓ Shower head cleaning & disinfection
- ✓ Descaling of outlets
- ✓ Clean and disinfection services
- ✓ Design and implementation of bespoke water management programmes
- ✓ Provision of bespoke data recording services and management systems
- ✓ Monitoring services
- ✓ Tank inspections
- ✓ Remedial works
- ✓ Calorifier inspections and drain samples
- ✓ Water sampling TVC, legionella, metals, taste and odour, etc.
- ✓ TMV servicing
- ✓ Closed system analysis of LPHW and Chilled systems
- ✓ Provision of chemical dosing apparatus and chemical supply
- ✓ Provision of chemical analytical services
- ✓ Cooling Tower Management systems

Legionella Remedial Works

Surevent offer an extensive refurbishment service which includes the installation of new water systems or an upgrade of your existing water system in compliance with current statutory requirements. From tank replacements, removal of dead legs to pipework installation we offer a full range of services.

Training

Knowledge is power, and you need staff that can understand and manage the risks associated with legionella. Our courses assist businesses and the people responsible within those organisations to understand their duty of care in relation to the control of legionella.

Our courses include practical guidance on how to carry out testing for legionella in line with statutory regulations and the HSC Approved Code of Practice L8.

The following courses are available:

- ✓ Legionella awareness and legislation
- ✓ Legionella management and responsible person training
- ✓ Legionella monitoring
- ✓ Log book and record keeping for the management of legionella

AIR QUALITY

Risk Assessment

Surevent offer a complete site risk assessment service, based on the current approved codes of practice. Results and recommendations will be provided so that positive action can be taken before problems arise.

Our comprehensive risk assessment includes:

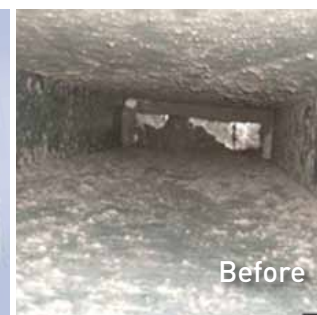

- ✓ Risk identification
- ✓ Assessment of risk sources
- ✓ A prioritised list of current risk levels
- ✓ Remedial actions suggesting suitable solutions
- ✓ Implementation, management and monitoring of precautions

Air Quality Monitoring

Poorly maintained air conditioning and ventilation systems can harbour micro-organisms and can deliver contaminated air to all areas within a building.

We have extensive experience of assessing the impact of all manner of developments and sources on ambient air quality. This includes initial survey of background air quality, emissions inventory, dispersion modelling, and impact assessment.

At Surevent, our expertise includes the design and assessment of stacks and measures to reduce emissions and their impact on the work environment.

Kitchen Extract Cleaning

Total grease removal is difficult to achieve and although good daily maintenance helps to a large extent, it is recommended that the complete system should be thoroughly inspected and deep cleaned on a regular basis to ensure compliance with health and safety legislation and insurance validation.

On completion of the work a certificate will be issued to confirm that the system was cleaned to the standards set out in 'TR19 – Cleanliness of Ventilation Systems Guide to Good Practice.' As recommended by the Building and Engineering Services Association.

Kitchen Deep Cleaning

Surevent can provide either one-off deep cleans or regular, scheduled deep kitchen cleaning, as required.

Regular deep cleans ensure that inaccessible areas that pose a significant health risk are cleaned to the highest standard. Ceilings, high level walls, preparation tables and kitchen equipment are all included. We strip everything down, clean it and reassemble so that your kitchen has the highest level of cleanliness.

Commercial kitchen hygiene is rigorously enforced by

Local Authority Environmental Health Officers using the Food Safety Act 1990 as their principal item of legislation and the Health and Safety at Work Act 1974. A hygiene certificate is issued after the deep clean.

Duct Work Cleaning

With the use of a variety of extraction cleaning devices along with specialised brushes and air jets, Surevent can remove all types of contamination and will disinfect where necessary. Many existing duct systems have insufficient access points to enable cleaning.

Surevent will install access doors at strategic points throughout the system to enable regular inspection, cleaning and disinfection to be undertaken.

WHY US?

Keeping you Updated

Our quarterly newsletter will keep you informed of any changes in legislation that affect your business enabling you to implement the require changes into your business.
